1. Introduction

For the past 20 years, the development of Internet-based technologies has made it possible to involve millions of private investors in trading on financial markets around the world. A huge demand for currency trading and large profits have triggered a rapid growth of transaction clearing centers and brokerage companies. Classical regulation has not yet created laws or rules which could protect the interests of traders and companies, and which could have been standardized, transparent and easily applicable to all market participants regardless of jurisdiction. At the present moment, about 90% of brokerage companies have no regulation. All of the above creates conditions for the appearance of scammers, which manipulate the client's funds, and substantial difficulties for the entry of new companies into the market.

Our goal is to create an independent marketplace with a smart contract depository, which records all trading and non-trading transactions in blockchain and is designed to become a single standardized system for monitoring and resolving disputes between the trader and the broker and to eliminate the possibility of misuse of client funds. Blockchain technology guarantees transparency and lack of affiliation. In SERENITY all trading and non-trading operations and transactions between brokers and traders will be processed and recorded in the system, which will eliminate the possibility of retroactive counterfeiting and will allow to have the right of final decision in case of disputes.

2. Problem description

In the meantime, about 6,000 brokers provide online trading services through the MetaTrader 4 and the MetaTrader 5 platforms. According to the statistics, about 4,000,000 traders use their trading accounts in brokerage companies daily. However, only 10% of these brokers hold a license to provide intermediary services on the financial markets. Most of the new brokers choose to not get license which is due to a complicated procedure, harsh requirements and extremely high costs, which start at \$200,000 and may reach several million dollars, and which small companies cannot afford at the initial stage.

Forex industry has acquired an ambiguous reputation due to lack of regulations. New companies face difficulties in attracting customers while customers risk losing their funds due to improper actions of brokers. Since the early 2000s, the trading process has not undergone any significant changes. The system remains closed and non-transparent. Brokers have technical ability to influence trading accounts data: they can freeze funds, recalculate profits, deny payment orders and use client funds for non-intended purposes. In this regard, the non-transparency of the system creates difficulties for serious market participants and favorable conditions for fraud. In addition, it also provides huge opportunities for unfair competition among companies and for manipulating the reputation of competitors.

Furthermore, over the years of the industry's existence, the regulation mechanisms also remain unchanged. The main problem of conventional regulation is in its restriction to a single country, while brokers operate online and attract clients from around the world. It means that, even if the broker is licensed, only the clients within one jurisdiction are protected.

At the same time, speculative trading in exchange rates remains one of the most profitable ways of making money and continuously attracts millions of people. An important aspect is the wide range of investments that exist, especially with respect to innovative investments, like cryptocurrencies (brokers and stock exchanges with margin trading) and binary options trading. These areas are even less protected from the point of view of a private investor. For this reason, the financial industry heavily needs new regulation technologies.

If you want to change the situation, you have to radically change the approach. What everyone needs here is a single transparent regulatory system created on the basis of modern technologies.

3. Project description

3.1. The project mission is to create a safe, transparent and standardized environment for cross-border forex trading.

3.2. Who benefits from SERENITY FINANCIAL

Brokers: all companies, which provide online trading on the currency and cryptocurrency exchanges.

Two categories of brokers will participate in the system:

- Category A Broker—providing repayment guarantees for the full amount of funds invested by the client, taking into account the profits/losses under completed transactions. These guarantees will be implemented by hedging trading risks through an open source and/or through the provided liquidity.
- Category B Broker—guaranteeing the return of clients' own deposited funds.

Traders – private investors, participants of speculative trading on the currency markets who place particular importance on the accuracy of trade execution, speed of transaction processing and an honest and quick withdrawal of funds.

IB – partners of brokerage companies who place importance on the reliability of interaction with the broker, on the accuracy and timeliness of settlements.

3.3. How Serenity Financial works

Client:

- Registers in the Serenity platform and chooses any certified broker from the pool
- Creates an account with the broker and selects Serenity as a funds deposit system
- Serenity will use Ethereum smart contracts for the client's fund safety. The smart contract code is published through Etherscan.
- Smart contracts are designed to ensure transfer of funds only to the broker or the client, requiring approval from at least two parties (Serenity, the broker and the client). Thus, if there's no dispute between the client and the broker, they can withdraw the funds on their own.
- The client's MetaTrader account receives the same amount of funds as is on the smart contract
- For category A brokers, Serenity transfers the funds to the liquidity provider.

- Broker and client install the Serenity plugin to the server-side and the client-side portions of MetaTrader platform. The plugin transmits the data on all the client's trading orders and their processing by the broker to Serenity systems in real time.
- All the trading data is registered in the distributed database, copies of which are simultaneously accessible by the broker and Serenity.
- Every hour a hash (cryptographic signature) of the data from Serenity's server is recorded in Ethereum blockchain via a special smart contract.
- If the clients files a claim against a trade and the hash doesn't match the database, any dispute is resolved in favor of the client.
- Client trades on the account
- For category A brokers (who use the liquidity provided by Serenity), if a client receives profit, Serenity transfers the earned funds to the smart contract. Thus, the possibility of withdrawal of all client's funds, including the received profit, is guaranteed.
- For category B brokers, the amount of funds in the smart contract remains unchanged until the client submits a withdrawal request. Thus, the possibility of withdrawal of the client's initial deposit is guaranteed.
- If a client has any claims against the broker regarding a trade's execution they can appeal to Serenity.
- At the first stage of reviewing the claim, the trades in question are automatically analyzed with "Verify My Trade" system.
- If the broker and/or the client don't agree with the results of the trade's automatic analysis, they may appeal to Financial Commission. It's a paid service. FinaCom experts receive all the data connected to the trade's execution, request additional documents from the client and/or broker if necessary, and announce the final decision. This ruling can not be appealed.
- A complaint can be filed within 1 business day after the trade is closed. This period may be extended in exceptional circumstances.

4. Benefits of buying SERENITY token during the ICO

During the ICO, SERENITY tokens are sold with a large discount (50% during pre-ICO and up to 40% during ICO) compared to their nominal value, while after the launch they will be accepted at the nominal value or at the market value, if it's higher.

Thus, the token is a valuable digital good that provides access to the services offered by the system, as Serenity will accept tokens as a payment for the commission's services. At least 50% of every payment for Serenity services must come in tokens. If a

client doesn't have tokens, they will have to buy them on an exchange. Since there will always be buy orders on the exchange, the quote will grow.

All used tokens will be destroyed, and so the total number of tokens will be constantly decreasing.

You may use SERENITY tokens to pay for transparent brokerage services and potentially may be able to resell them to SERENITY clients after the system's launch.

The following sections contain calculations of the token demand in the SERENITY system.

SERENITY TOKEN (\$) DEMAND BY QUARTER

The diagram and the table shows an estimated calculation of the amount of tokens that will be used during the first three years after the ICO, taking into account the system development period.

The calculation is explained in detail in the following section.

4.2. Why Serenity will be a success

SERENITY FINANCIAL will generate income in several ways.

- Commission fees for the issue of internal tokens in the system (or smart contracts linked to Ethereum)
- Subscription fees from category A brokers for a package of services, including technologies and liquidity.
- Commission fees for manual arbitration.

The target audience of the project are brokers providing online trading services through the MetaTrader 4 and the MetaTrader 5 platforms. The total number of such brokers is about 6,000. Of these, only 10% are regulated. That means we have a mutual interest with 90% of the brokers. At the same time, for the remaining 10%, participation in the system is also beneficial for PR purposes. Between all of those

brokers there are about 4,000,000 traders. Average monthly deposits and withdrawals vary in the range of 400,000–600,000 USD in total for each broker.

When there are at least 1000 brokers in the system and 10% of deposits pass through the system, the average monthly turnover of cash will average to \$50 million.

The fee for the creation of a contract and its movement within the network is 1%. This is about the same as payment systems charge for accepting cryptocurrencies, but in our system for the same price brokers will receive all of our services. Earnings from these fees are estimated at 500,000 USD per month.

Some brokers will obtain category A status and additional fees will be generated from the subscriptions and the sale of technology and liquidity. The average monthly turnover is \$2 billion per broker and the usual margin for the sale of liquidity of \$2 for \$1 million traded. If 100 (10%) of SERENITY brokers get category A, the sale of liquidity will generate an additional \$400,000 per month. In addition, with a standard subscription fee of \$2000 per month, this service will bring another \$200,000 monthly.

Overall, the estimated revenue will be \$1,1 million monthly.

SERENITY FINANCIAL will also be attractive to partners of brokerage companies – rebate services and similar. It is extremely important for such types of businesses that mutual settlements take place very transparently and quickly. The project will allow instant payments of partner's rewards.

4.3. Performance targets of the token sale

Serenity will need \$2 million to develop a minimal viable product and cover all the necessary marketing costs. This is the minimal level (soft cap) of the project.

To develop the exchange and the KYC, Serenity will need \$5 million. The exchange will allow deposit/withdrawal of funds in cryptocurrency and fiat money. The exchange will also allow trading real assets using cryptocurrency. On this stage, the KYC (know your client) procedures will also be implemented and integrated with all the brokers.

To enhance the security of the system, Serenity plans to develop its own custom blockchain, holding all the transactions of the clients. It will be possible if the project gets at least \$10 million in funding.

If the project gets at least \$14 million, it will start developing its own supply chain for Forex liquidity, including acquiring licenses in major Forex regulations (EU, UK, USA,

Australia, etc.), developing its own bridge solution for feeding the liquidity to brokerages.

The project Hard Cap is \$19M. Reaching this target will enable us to acquire licenses in all major jurisdictions.

4.4. Fundraising targets in details

1. < 2 million—ICO is considered unsuccessful, money is returned
2. 2 million—minimum level of funding (soft cap)—implementation of the main functionality of the system:
 - a. Settlement system—a system for holding funds between a broker and a client using smart contracts.
 - b. Arbitration system—integration with arbitration services (Verify My Trade)
 - c. The remaining funds are used for sales/marketing
3. 5 million— development of the exchange and the KYC system
 - a. Setting up deposit/withdrawal of funds in cryptocurrency
 - b. Implementing cryptocurrency trading
 - c. Enabling Investments in Crypto Funds performance indices.
 - d. The exchange will offer liquidity option to all the brokers in the system.
 - e. Resolving legal matters regarding clients' data collection
 - f. Setting up collection and verification of the data
 - g. Building legal model allowing to share this data with brokerages
4. 10 million - implementation of the system recording clients' transactions:
 - a. Development of custom blockchain storing transaction data
 - b. Integrating trading platforms with this blockchain
 - c. Development of server-side and client-side plugins for MetaTrader to sign all transactions
5. 14 million - implementation of liquidity supply pool
 - a. Development of a bridge for trading platforms, integrated with our payment solution
 - b. Connecting external liquidity suppliers
 - c. Obtaining the necessary brokerage licenses for working with prime brokers
6. 19M— Launch of the platform in traditional jurisdictions (establishing legal entities, compliance with capital requirements of governmental regulatory bodies, license acquisition)

5. System tokens issued under the framework of ICO

Revenues obtained from the sale of tokens will be used to further develop the platform, promoting it and expanding its reach.

A client will be required to pay with SERENITY tokens at least 50% and up to 100% of the prices for the services. If a client doesn't have SERENITY tokens, they will have to buy them on exchanges. Tokens will be accepted at a cost not lower than their nominal value in USD at the moment of placement, or at a market value, if it's higher. Tokens that are used for paying for the company's services will be withdrawn from circulation and destroyed.

The sale of SERENITY tokens will be conducted in several stages. Each stage will have its own discounts and a specified amount of tokens for sale. In total 400,000,000 tokens will be minted with a nominal value of 0.0001 ETH.

1. The Pre-ICO stage will have 50% discount for SERENITY tokens. After this stage there will be a pause to set the marketing plan for the project at the stage of ICO proper.

All participants who applied for participation in Pre-ICO before its start, have the priority right to buy tokens at the beginning of the sales.

If the minimum target amount of funds will not be raised at the ICO stage, the pre-ICO participants are exempt from the refunds.

2. At the ICO stage the discount will be provided regardless of whether the minimum fundraising targets were achieved.

Period	Discount	Token price
01/25/18 - 01/31/18	40%	0,00006 ETH
02/01/18 - 02/07/18	35%	0,000065 ETH
02/08/18 - 02/14/18	30%	0,00007 ETH
02/15/18 - 02/21/18	25%	0,000075 ETH
02/22/18 - 02/28/18	20%	0,00008 ETH
03/01/18 - 03/07/18	10%	0,00009 ETH

3. All unsold tokens will be destroyed.

4. After the end of ICO tokens will be freely traded on exchanges
